

CLAIMS

The invention having been thus described, what is claimed as new and desired to secure by Letters Patent is:

1. Non-binding knee pads comprise a pad body adapted to engage the waist of a user and to extend to below the knees of the user in the front of the leg, knee pads which connect to the pad body and are positioned in such that the pads will fall under the knees of the user when the user kneels, and a leg belt or belts which loosely encircle each leg and serve to hold the pad body and knee pads in proximity to the legs whether kneeling or standing.
2. The knee pads of claim 1 wherein the knee pads are removeable.
